

KAAKBREKER BB 250

Model with most ergonomic handling

The Jaw Crusher BB 250 is specifically designed for accepting large feed sizes up to 120 x 90 mm. The gap width can be set stepless from 0-30 mm. Depending on the sample material, particle sizes down to 2 mm can be obtained, resulting in a crushing ratio of 45. A throughput of up to 300 kg/h is possible with the BB 250.

The RETSCH jaw crusher series is available in 8 different sizes. Throughput and final fineness depend on the crusher type, selected gap width and breaking properties of the sample material.

Robust design, simple handling and cleaning are the features of the RETSCH jaw crusher models. Small amounts of sample are processed batchwise; for larger amounts the crushers can be operated continuously.

ROBUST & VERSATILE

- | Front door facilitates cleaning of crushing chamber
- | Infinite/continuous gap width setting
- | Wide range of materials for contamination free grinding
- | Collecting receptacle with outlet for continuous operation
- | Connector for dust extraction
- | Scale indicates jaw wear
- | Selection of hoppers for specific applications

Model with most ergonomic handling

KAAKBREKER BB 250

SUPERIORITY IN DETAIL

For sample amounts up to 10 l, the Jaw Crusher BB 250 is used batchwise; for larger volumes it can be operated continuously. Thanks to the modular concept of the housing and frame, this jaw crusher is suitable for a wide range of applications.

A front door gives direct access to the crushing chamber at a perfect height for ergonomic and easy cleaning. The feed hopper with splash-back protection can be removed quickly and easily. The Jaw Crusher BB 250 has a connection for dust extraction and is protected against mechanical overload. A scale indicates the wear of the breaking jaws, informing the user when it is time for an exchange.

The crushing chamber is available in 6 different materials to ensure neutral-to-analysis sample preparation. The technical and safety features make this jaw crusher ideally suited for sample preparation in laboratories and for small scale production.

Front door allows for easy cleaning

ACCESSORIES FOR THE JAW CRUSHER BB 250

BREAKING JAWS

Breaking jaws and wearing plates are available in five different materials to be selected depending on the sample and the analysis to be carried out:

- | mangaanstaal
- | roestvrij staal
- | wolframcarbide
- | staal voor het malen zonder zware metalen
- | roestvrij staal 316L
- | NiHard4 staal

TRECHTER TYPES

Three hopper types are available for the BB 250 jaw crusher.

The standard hopper can be optionally equipped with a special infeed hopper. This additional hopper can be placed on a table for loading up to 10 l of sample material. By attaching it to the standard hopper with a connection rod, the sample is fed into the BB 250 with the help of a manual pusher.

A special hopper is available for quick and easy feeding of drill cores or large amounts of bulk material. The cover can be closed to serve as splash back protection.

COLLECTING VESSELS

In addition to the standard receptacle which accepts sample amounts up to 10 l, two options are available.

For continuous operation the collection funnel with outlet is the ideal choice.

The large volume receptacle accepts up to 26 liter of sample and comes with a flexible connection flange and a carrier on wheels. This version is the best choice for dust-free operation.

KAAKBREKER BB 250 & SCHIJVENMOLEN DM 200

TWO-STAGE SAMPLE PREPARATION IN ONE STEP

De combi-eenheid, bestaande uit de kaakbreker BB 250 en de schijfmolen DM 200 die via een cyclonaafscheider zijn gekoppeld, maakt een geautomatiseerde, continue monstervoorbereiding mogelijk. Het materiaal wordt rechtstreeks van de kaakbreker naar de schijfmolen getransporteerd, waardoor grote hoeveelheden in één stap kunnen worden verwerkt tot een gedefinieerde eindfijnheid van kleine deeltjes. Dit maalproces in twee stappen is nodig voor harde of brosse materialen die eerst grof moeten worden verkleind, gevolgd door fijn vermaling. De combi-unit stroomlijnt workflows, elimineert handmatige monsteroverdracht en verkort de verwerkingstijd aanzienlijk. Het minimaliseert de stofuitstoot en zorgt voor efficiënte, reproduceerbare resultaten, waardoor het een ideale oplossing is voor toepassingen in de landbouw, cementproductie, mijnbouw, analyse van edelmetalen, materiaalonderzoek en milieuanalyse.

CYCLONE SYSTEM FOR JAW CRUSHERS

BYE-BYE DUST AND SAMPLE LOSS

Whether you're preparing samples in mining, precious metals, materials research, or environmental analysis, the RETSCH Cyclone System ensures efficiency, precision and safety like never before!

Why should you choose the RETSCH Cyclone System?

| Total Sample Recovery

Eliminate sample loss during crushing with our cyclone, ensuring accurate and reproducible results for every analysis!

| Enhanced Operator Safety

Our cyclone significantly reduces dust exposure, creating a safer and cleaner working environment for your team!

Plus: Existing instruments (BB 50, BB 250, BB 400 or BB 500) can be retrofitted with the Cyclone System.

USING THE CYCLONE SET WITH A COMBINATION OF TWO MACHINES

Beyond the general advantages of a cyclone, this combination enables pre-crushing and fine grinding in a single pass, resulting in increased process efficiency.

Existing machines BB 250 and DM 200 can be combined with a retrofitting system.

KAAKBREKER BB 250

PRINCIPE

De kaakbreker BB 250 is een robuuste, performante breker. Het produkt valt door de toevoertrechter, die tegen terugspringend produkt beveiligd is, in de trechtersvormige maalkamer.

Daar wordt het materiaal gebroken tussen de gegolfde breekplaten door een excentrisch bewegende breekarm en de vaststaande arm en naar beneden toe bewogen.

De traploos instelbare spleetinstelling kan worden afgelezen op de zijdelings aangebrachte lat en garandeert daarbij een optimale, aan het te malen produkt aangepaste instelling.
